### PRODUCT DESCRIPTION

**ABC Skootamota 1919 124 cc Model 1B exhaust over Inlet frame# 616 engine # 622**

Around 1920 there was both in Europe and the USA a short-lived interest in motorised scooters. Scooters were light, cheap to run and simple to use; it was thought that they might attract new (female) urban customers, that would not so easily choose for a conventional motorcycle as means of transport. The ABC (All British Cycle) is one of the very first scooters and probably the best of the first generation of machines.

It was designed by the prolific and inventive Granville Bradshaw and uses a 60mm x 40mm bore x stroke overhead exhaust valve single- cylinder engine driving the 16" wheel by chain.

The tubular frame is light and made a very manageable machine with a speed range of up to 20 mph. "One push with the left foot on the ground starts the engine and the machine" stated the brochure. Unlike some machines of the period it is fitted with a seat and was used quite prominently on the roads of the period.

This example is an older restoration and comes complete with Lucas "Silver King" oil lamp and handlebar-mounted claxon.
