### PRODUCT DESCRIPTION

BSA 1932 Model W32-7 499 cc OHV single frame # Z6 . 2088 engine # Z7 . 2567

The BSA range for 1932 consisted of no less than twelve solo types.

New-comer was the W32-7, a good-looking 500 OHV “designed to meet the requirements of sporty riders who want a really fast sports machine with ample reserve of power” as the company put in their publicity around the new model.

The machine’s specifications were quite up to date: the lubrication was by pressure feed from a gear type pump to a double roller big end bearing .

The oil sump with a capacity of three pints was cast in one unit with the crankcase.

There was a built-in pressure gauge in a tank-mounted panel that also held an amp gauge, inspection light and switch.

The machine had a dry plate clutch and four-speed BSA gearbox with screw adjustment for front chain tension.

The brakes were coupled in that by pressing the brake pedal the rider would operate both front and rear brakes.

The petrol tank had a capacity of 2 ¼ gallons and the machine weighed 310 lbs.

The specimen we can offer here is in outstanding authentic condition, it has the charming patina a newly-restored machine often lacks.

It has been in use regularly with its former French owner and goes like a rocket.
