PRODUCT DESCRIPTION

Douglas 1922 2 ¼ HP Model WD 22 349 cc SV flat twin frame # 54671 engine # 53193

This Bristol-based firm developed the horizontally opposed fore-aft unit in about 1907 and continued utilizing this engine layout well into the thirties.

The earliest Douglas models had direct belt drive, but in 1910 a two-speed gearbox was added, with the control on top of the petrol tank. Douglas machines became very popular because of their lightness, ease of starting and speed: in the 1912 Junior TT races Douglas took first, second and fourth places.

In the First World War thousands of 2 ¼ HP machines were commissioned for use by despatch riders and performed splendidly.

By 1920, the standard 2 ¼ model W had a three speed countershaft gearbox with kick-starter, a clutch and footboards.

The WD had the basic "veteran" specification of two speed gearbox and did not have the luxury of a clutch.

Lubrication is by means of hand pump with drip feed regulator.

The petrol tank holds 5 ½ litres, the oil compartment 1 ½ litres.

Petrol consumption: about 1 litre per 40 kilometres.

This light (about 80 kg) but agile vintage twin has been nicely restored and comes with brass bulb horn.

It will be a pleasure to ride or show!
