PRODUCT DESCRIPTION

Harley-Davidson 1933 model RE 750 cc side valve V-twin frame # 33-1477 engine # 33RE1375

The company introduced the side valve concept for the V-twins for the 1929 model year when the 45 ci model D was introduced.

A year later the F head big twin was replaced by the side valve 74 ci model V.

The RE was a special model with magnesium-alloy pistons.

A remarkable feature of the 1933 models was the stylized eagle motif tank panel, which gave the machine an Art deco touch.

The early thirties were difficult years for the company because of the economic depression. Harley sales were extremely low in 1933: no more than about 550 750 cc models were produced. The 1200 cc model sales were a bit better with about 2,000 machines being sold.

This RE was sold new in The Netherlands and was in use till the sixties, first by the original owner and then by his son who used the machine as his personal transport when he was a university student.

During the war years the machine was hidden in a wood stack.

From the seventies the machine was displayed for many years in an enthusiast's living room.

Some six years ago a thorough technical restoration was undertaken.

Most of the exterior of the motorcycle is still in original condition.

There's a Corbin speedometer on board.

In the December 2009 Club magazine of the Dutch Vintage Motorcycle Club an interesting history of this tough survivor was published.
