PRODUCT DESCRIPTION

Matchless 1954 G3LS frame nr A42080 Engine nr 54/16M 23157

Associated Motorcycles (AMC) was formed in 1938, as a parent company for Matchless and AJS motorcycles.

AMC later absorbed Francis Barnett James and Norton.

The Matchless G3L is a motorcycle developed for use by the British Army during the Second World War, when

Matchless manufactured 80,000 G3 and G3L models.

The G3/L 350cc OHV became one of the most popular motorcycles used during the war and in 1941 Matchless

motorcycles introduced telescopic front forks called "Teledraulic" forks, considered by some to be the first

major innovation in front suspension in 25 years.

The telescopic design with oil damping – an idea that was to become the standard for almost all future motorcycles.

Production of the G3/L began in late 1941, and a series of modifications and improvements were introduced as

it entered military service.

Technically the main difference between a G3L rigid model has no rear suspension whereas the G3LS model

has 'jampot' rear suspension, so called because of the looks of the damper units.

The Matchless G3Ls was a popular choice for UK trials riders, and after the war there were plenty of bikes and

spares to enable champions such as Artie Ratcliffe and Ted Usher to win numerous national events for

Matchless.

The model G3Ls stayed in production till 1960.

Matchless built predictable handling, comfortable, well-made, reliable and economical motorcycles and this

beautifully restored Matchless G3Ls is one of them and is a very good runner
