PRODUCT DESCRIPTION

Ner-a-Car ca. 1924 Model "C" 350 cc side valve Blackburne

During WW1 American Carl Neracher designed a motorcycle that should be clean, easy to operate, stable, comfortable and reliable.

He came up with an unusual machine that was constructed more like a car than like a motorcycle; it had no frame but a chassis made of beams, 221 cc two stroke engine, friction drive and hub-centre steering.

This rather unique means of transport was aptly named the Ner-a-Car.

Neracher had some trouble to find investors and manufacturers for his machine.

In 1919 he signed an agreement with the British Sheffield Simplex firm to produce the Neracar for England and its Colonies, excepting Canada. Production started in 1921.

Having found financial support in the USA as well, the Ner-a-Car Corporation started production in Syracuse, N.Y. in 1922.

In November 1922 Cannonball Baker rode a Neracar from New York to Los Angeles, a distance of 5420 kilometres.

He averaged 30 Km/h and used 2.7 litres of petrol per 100 kilometres. In less than 8 days he spent 179 hours in the saddle...

In 1923 the model B with larger front mudguard and 285 cc engine was brought out in England. A year later the model C came out, powered by a 350 cc Blackburne engine and fitted with a conventional clutch and gearbox.

This rare model "C" is unrestored.

More detailed Neracar information can be found on Ken Philp's website; his book on the make is also presented on the site.
