### PRODUCT DESCRIPTION

**Peugeot 1907 “Légère” 1 ¾ HP ca 220 cc frame#12608 engine # 134**

This Peugeot “Motocyclette Légère” or “Light Motorcycle” is quite unlike the usual veteran Peugeot single.

The double sprung front forks are not of the well-known Truffault principle and the little Peugeot-Zédel engine (64x68) is unusual in that it has a so-called “démultiplicateur”, a reduction gear which reduces the engine revolutions to a quarter of the crankshaft speed.

The 1907 catalogue sums up the advantages of the system: lower belt speed and consequently less belt slip, so more efficiency of the engine.

A second important feature is that the radial force that the pulling belt normally exerts on the crankshaft is taken up much better by the reduction gear pulley, so again a reduction in friction.

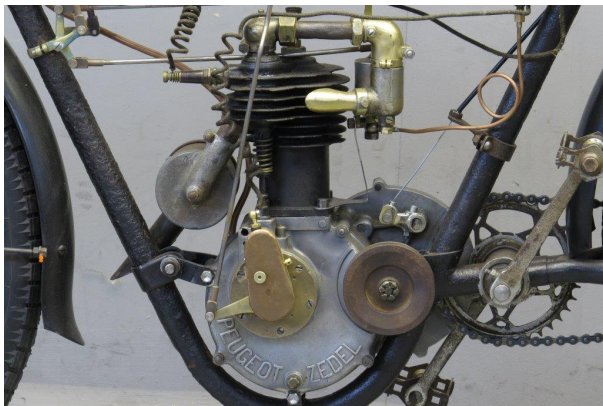

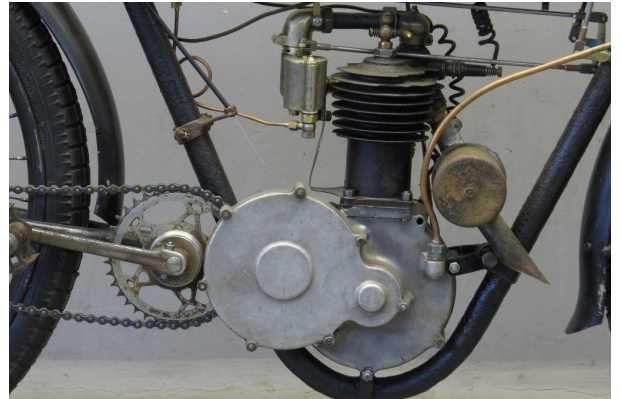

The factory claims a running speed of about 35 km/h, at which speed the engine turns at a healthy 2000 rpm.

Ignition is by battery and coil, weight about 40 kilograms.

This unusual Peugeot comes in unrestored condition.
