### PRODUCT DESCRIPTION

**Rudge 1932 "Special" 499 cc four-valve single frame# 47287 engine# 5224**

The Rudge\_Whitworth company was an established bicycle factory that entered motorcycle production in 1911.

Their first machines were 499 cc IOE singles.

[They developed the famous Multi gear, with a possibility of up to 21 gear positions.

In 1924 the factory introduced a new range of four valve singles.

In 1928 Graham Walker managed to win the Ulster Grand Prix on a Rudge, after a heroic handlebar-to-handlebar battle with Charlie Dodson on a Model 90 Sunbeam.

Since then the sporty Rudge models were designated "Ulster".

In the 1930 Junior TT Rudge scored 1, 2, 3 with the all new 350cc 4 radial valve.

In 1931 the engine was scaled down to 250 cc and that proved to be a real winner too, judging from 1st, 2nd and 4th places plus the lap record in the Lightweight TT.

Rudge used different layouts for its 4 valve models: from 1930 onwards they used parallel inlet and exhaust valves for all Specials; the radially disposed exhausts were only used on the Ulster and racing models.

The sparking plug size on all Specials was 18mm.

Practical features of this well-engineered machine are the enclosed fork spring, the oil bath chain primary drive in oil-tight aluminium case and the handle to that is coupled to the centre stand.

This "Special", the touring version of the "Ulster", is a well-fettled older restoration.
