### PRODUCT DESCRIPTION

#### **Scott 1926 Flying Squirrel 498 cc water-cooled two-stroke twin frame # 692 engine # FZ 8806**

Alfred Scott, a gifted Yorkshire engineering genius, started experimenting with twin cylinder two-stroke power around the year 1900, when he mounted his little air-cooled twin in front of the steering head of his Premier bicycle.

He kept on refining his design and by 1910 the open-framed machine, so much different from standard motorcycle practice, was attracting more and more attention.

In the early twenties the type name "Squirrel" appeared for a new sports model which gained great popularity for its speed and lightness.

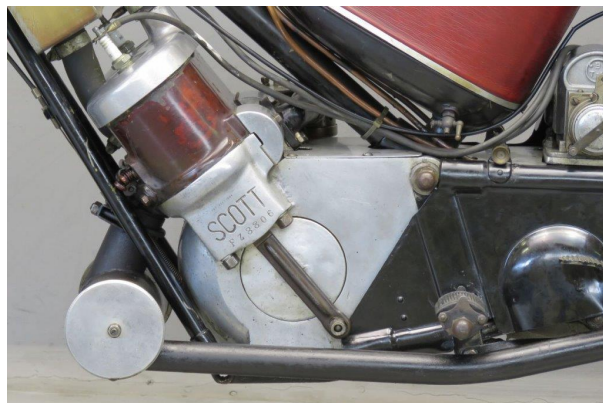

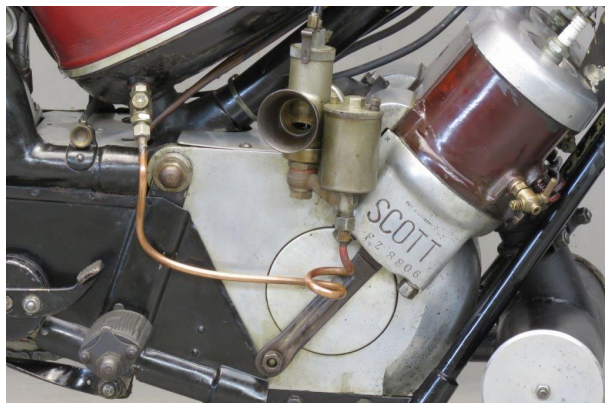

For the 1926 season the Flying Squirrel was introduced; its specifications included full mechanical oiling by means of a Best and Lloyd pump, enlarged exhaust ports with polished passages and an improved water-cooled cylinder head that gave better plug cooling.

The Flying Squirrels were available in 498cc and 596 cc capacities and there was a choice of two or three speeds.

This 2-speeder is a well-running older restoration.
